TASK 12 – CLINICAL DECISION SUPPORT: SYSTEM INFERENCE (ROGER)

Roger, a 65-year old male with *coronary artery disease* (CAD), presents today with knee and lower back pain. As you open his electronic record, you notice a system alert stating that Roger is not taking *aspirin or other antiplatelet medication* for his CAD. Your first task is to locate the system alert, and your second task is to prescribe aspirin for Roger.

- Navigate to the system notification recommending that Roger take aspirin or other antiplatelet medication and verbally indicate when you believe to have found it.
- Navigate to the medication order form and prescribe aspirin using as much as the information from Table 1 as is required. Verbally state when you believe you have successfully completed this task.

Table 1. Drug Information	
Generic Drug Name	Aspirin
Strength	81 mg
