ABBREVIATIONS

AD	ACCESS DOOR, AREA DRAIN
AFC	ABOVE FINISHED CEILING
AFF	ABOVE FINISHED FLOOR
AP	ACCESS PANEL
APD	AIR PRESSURE DROP
BWV	BACK WATER VALVE
CIRC	CIRCULATING
COND	CONDENSER, CONDENSATE
CONN	CONNECTION
CW	COLD WATER
D	DEPTH, DRAIN
DET	DETAIL
DF	DRINKING FOUNTAIN
DISC	DISCONNECT
DPR	DAMPER
DWH	DOMESTIC WATER HEATER
EC	ELECTRICAL CONTRACTOR
ECC	ECCENTRIC
EDB	ENTERING DRY BULB
EHC	ELECTRIC HEATING COIL
ESP	EXTERNAL STATIC PRESSURE
ETR	EXISTING TO REMAIN
FCO	FLOOR CLEAN OUT
FCS	FLOOR CONTROL STATION
FD	FLOOR DRAIN, FIRE DAMPER
FLR	FLOOR
FUT	FUTURE
GLV	GLOBE VALVE
GV	GATE VALVE
HB	HOSE BIBB
HD	HEAD, HUB DRAIN
HSC	HORIZONTAL SPLIT CASE
HTG	HEATING
HWC	HOT WATER CIRCULATOR
IE	INVERT ELEVATION
IW	INDIRECT WASTE
JB	JUNCTION BOX
JP	JOCKEY PUMP
L	LENGTH, LAVATORY
LAV	LAVATORY
M	METER
MC	MECHANICAL CONTRACTOR
MTD	MOUNTED
MVD	MANUAL VOLUME DAMPER
N.C.	NORMALLY CLOSED
NIC	NOT IN CONTRACT
N.O.	NORMALLY OPEN
OBD	OPPOSED BLADE DAMPER
OD	OUTSIDE DIAMETER, OVERFLOW DRAIN
OPG	OPENING
PC	PLUMBING CONTRACTOR
PD	PRESSURE DROP, PLANTER DRAIN
PNL	PANEL
PT	PLUMBING TRIM
PV	PLUG VALVE
R	RISER
RED	REDUCER
RV	RELIEF VALVE
SAF	SUPPLY AIR FAN
SCR	SILICON CONTROLLED RECTIFIER
SECT	SECTION
SENS	SENSIBLE
SFCS	SPRINKLER FLOOR CONTROL STATION
SKVA	STARTING KILOVOLT-AMPS
SKW	STARTING KILOWATTS
SP	SUMP PUMP, STATIC PRESSURE
SPR	SPRINKLER
SS	SERVICE SINK
SSFU	SANITARY SEWER FIXTURE UNITS
SSSC	SOLID STATE SPEED CONTROL
STR	STRAINER
SUSP	SUSPEND
SV	SANITARY VENT
TC	TEMPERATURE CONTROL
TDH	TOTAL DYNAMIC HEAD
TF	TRANSFER FAN
TP	TRAP PRIMER
U	URINAL
UON	UNLESS OTHERWISE NOTED
U/F	UNDERFLOOR
U/S	UNDERSLAB
VD	VOLUME DAMPER
VOV	VALVE ON VERTICAL
W	WATT, WASTE, WIDTH
WC	WATER CLOSET
WCO	WALL CLEANOUT
WH	WALL HYDRANT
WM	WATER METER
WP	WEATHERPROOF
WPD	WATER PRESSURE DROP
Z	ZONE

USE INDUSTRY STANDARD FOR OTHER THAN NOTED

MECHANICAL/PLUMBING SYMBOLS (ALL SYMBOLS SHOWN ARE NOT NECESSARILY USED ON THE DRAWINGS)

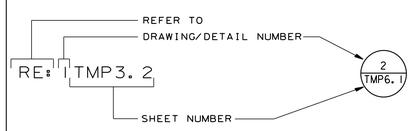
PIPING TYPES

- CHS — CHILLED WATER SUPPLY
- CHR — CHILLED WATER RETURN
- S — STEAM S=0 TO 15#, 60HPS=60# HIGH PRESS. STEAM
- C — CONDENSATE RETURN
- PC — PUMPED CONDENSATE
- RHG — REFRIGERANT HOT GAS LINE
- RS — REFRIGERANT SUCTION LINE
- RL — REFRIGERANT LIQUID LINE
- SANITARY DRAIN BELOW FLOOR
- SANITARY DRAIN ABOVE FLOOR
- SANITARY VENT
- GW — GREASE (KITCHEN) WASTE
- SD — STORM DRAIN
- OD — OVERFLOW DRAIN
- AW — ACID WASTE
- AV — ACID VENT
- COLD WATER
- HOT WATER
- HWR — HOT WATER RECIRCULATION
- G — NATURAL GAS
- A — COMPRESSED AIR
- AA — "AA" DENOTES GAS TYPE
- MA — MEDICAL AIR
- DI — DEIONIZED WATER
- V — VACUM
- F — FIRE STANDPIPE, FIRE LINE
- FS — FIRE SPRINKLER
- TP — TRAP PRIMER
- D — DRAIN LINE
- aaa — EXISTING PIPE, "aaa" DENOTES TYPE
- X aaa X — EXISTING PIPE TO BE REMOVED, "aaa" DENOTES TYPE

PIPING SYMBOLS

- ELBOW UP
- ELBOW DOWN
- VALVE IN DROP
- VALVE IN RISE
- DIRECTION OF FLOW
- DIRECTION OF SLOPE DOWN
- CONCENTRIC REDUCER
- ECCENTRIC REDUCER
- TEE OUTLET UP
- TEE OUTLET DOWN
- UNION
- PIPE ANCHOR
- EXPANSION JOINT
- STRAINER WITH BLOWDOWN VALVE
- GATE VALVE, HVAC BALANCING/STOP VALVE
- GLOBE VALVE
- BALL VALVE
- BALANCING VALVE WITH DIFFERENTIAL PRESSURE TAPS
- OS&Y VALVE
- CHECK VALVE
- TWO POSITION CONTROL VALVE
- TWO-WAY MODULATING CONTROL VALVE
- THREE-WAY MODULATING CONTROL VALVE
- PRESSURE REDUCING VALVE
- FCS — SPRINKLER FLOOR CONTROL STATION
- GAS VALVE
- MANUAL AIR VENT
- AUTOMATIC AIR VENT
- T&P RELIEF VALVE
- VACUUM BREAKER
- LINE CLEANOUT
- FLOOR CLEANOUT
- PRESSURE GAUGE WITH GAUGE COCK
- THERMOMETER
- WATER METER
- FLEXIBLE CONNECTION
- PRESSURE AND TEMPERATURE TAP
- FLOW VENTURI

DRAWING/DETAIL REFERENCE KEY



MISCELLANEOUS

- FLOOR DRAIN
- AREA DRAIN
- ROOF DRAIN OR OVERFLOW DRAIN
- HOSE BIBB
- WALL HYDRANT
- PLUMBING FIXTURES
- POINT OF NEW CONNECTION TO EXISTING
- 1 — DRAWING NOTE REFERENCE
- 1 R620 — OWNER OR CONTRACTOR FURNISHED EQUIPMENT REFERENCE
- aaabb — MECHANICAL/PLUMBING EQUIPMENT REFERENCE. "aaa" DENOTES TYPE, "bb" DENOTES NUMBER.
- a bbb cc/dd — AIR DISTRIBUTION DEVICE REFERENCE. "a" DENOTES TYPE, "bbb" DENOTES CFM, "cc/dd" DENOTES NECK SIZE
- aaa bbb ccc KW — HVAC TERMINAL UNIT REFERENCE. "aaa" DENOTES TYPE, "bbb" DENOTES CFM, "ccc KW" DENOTES HEATING KW WHERE APPLICABLE
- P I — RISER DESIGNATION. "P" DENOTES WASTE/VENT OR WASTE/VENT/WATER, "W" DENOTES WATER, "DS" DENOTES DOWNSPOUT, "F" DENOTES FIRE.
- FS — FLOW SWITCH
- VS — VALVE SUPERVISORY SWITCH
- FIRE HOSE CABINET
- FIRE HOSE RACK
- FIRE DEPARTMENT SIAMESE CONNECTION
- T — THERMOSTAT
- S — TEMPERATURE SENSOR
- H — HUMIDISTAT
- F — FIRESTAT
- D RA — DUCT SMOKE DETECTOR. "SA" DENOTES SUPPLY AIR, "RA" DENOTES RETURN AIR PROVIDED AND WIRED BY DIV. 16 - INSTALL BY DIV. 15
- PNEUMATIC TUBING OR CONTROL WIRING
- TC — TEMPERATURE CONTROL PANEL
- DP — PRESSURE DIFFERENTIAL SENSOR (ANALOG)
- F — FLOW SENSOR (ANALOG)
- RH — RELATIVE HUMIDITY SENSOR (ANALOG)
- P — PRESSURE SENSOR (ANALOG)
- PI — POSITION INDICATOR (ANALOG)
- HL T — HIGH LIMIT T=TEMP P=PRESS F=FLOW RH= REL HUMIDITY
- LL T — LOW LIMIT T=TEMP P=PRESS F=FLOW RH= REL HUMIDITY

DUCTWORK

- SUPPLY AIR DIFFUSER, NO LETTER DENOTES NEW, "R" DENOTES RELOCATED EXISTING.
- EXISTING SUPPLY AIR DIFFUSER, NO LETTER DENOTES TO REMAIN, "R" DENOTES TO BE REMOVED AND REUSED AS APPLICABLE.
- RETURN AIR OR EXHAUST GRILL, NO LETTER DENOTES NEW, "R" DENOTES RELOCATED EXISTING.
- EXISTING RETURN AIR OR EXHAUST GRILL, NO LETTER DENOTES TO REMAIN, "R" DENOTES TO BE REMOVED AND REUSED AS APPLICABLE.
- 100 100 — LIGHT TROFFER SUPPLY AIR BOOTS, NO LETTER DENOTES NEW, "R" DENOTES RELOCATED EXISTING. NUMBER DENOTES CFM.
- 100 100 — EXISTING LIGHTING TROFFER SUPPLY AIR BOOTS, NO LETTER DENOTES TO REMAIN, "R" DENOTES TO BE REMOVED AND REUSED AS APPLICABLE. NUMBER DENOTES CFM.
- SUPPLY AIR SLOT, NO LETTER DENOTES NEW, "R" DENOTES RELOCATED EXISTING.
- EXISTING SUPPLY AIR SLOT, NO LETTER DENOTES TO REMAIN, "R" DENOTES TO BE REMOVED AND REUSED AS APPLICABLE.
- RETURN AIR SLOT, NO LETTER DENOTES NEW, "R" DENOTES RELOCATED EXISTING.
- EXISTING RETURN AIR SLOT, NO LETTER DENOTES TO REMAIN, "R" DENOTES TO BE REMOVED AND RELOCATED AS APPLICABLE.
- NEW RECTANGULAR OR ROUND DUCTWORK
- EXISTING DUCTWORK
- EXISTING DUCTWORK TO BE CLEANED, TREATED & COATED
- EXISTING RECTANGULAR OR ROUND DUCTWORK TO BE REMOVED AND RELOCATED AS APPLICABLE
- NEW FLEXIBLE DUCT
- EXISTING FLEXIBLE DUCT
- EXISTING FLEXIBLE DUCT TO BE REMOVED
- SUPPLY OR OUTSIDE AIR DUCT
- RETURN, RELIEF, OR EXHAUST AIR DUCT
- FLEXIBLE DUCT CONNECTION
- UP — INCLINED RISE IN DUCT (TWO ELBOWS)
- DN — INCLINED DROP IN DUCT (TWO ELBOWS)
- TURNING VANES
- DUCT EXTRACTOR
- SPLITTER DAMPER
- DUCT MOUNTED HEATING COIL
- DUCT MOUNTED FILTER
- IN-LINE FAN WITH FLEX CONNECTORS
- H — DUCT MOUNTED HUMIDIFIER
- DOUBLE DUCT HVAC TERMINAL UNIT (INDICATES FAN POWERED)
- SINGLE DUCT HVAC TERMINAL UNIT (INDICATES FAN POWERED)
- FIRE DAMPER
- S — SMOKE DAMPER
- FS — FIRE/SMOKE DAMPER
- MANUAL BALANCING DAMPER
- B — GRAVITY BACKDRAFT DAMPER
- M — MOTORIZED DAMPER
- HIDDEN LINES

GENERAL NOTES

A. REFER TO SPECIFICATIONS FOR MATERIALS AND METHODS FOR MECHANICAL/ELECTRICAL CONSTRUCTION.

B. REFER TO EXISTING SITE CONDITIONS. VISIT THE SITE TO DETERMINE ANY SPECIAL BUILDING CONDITIONS THAT ARE NOT INDICATED ON THE DOCUMENTS.

C. ALL DUCTWORK SIZES SHOWN ARE FREE AIR STREAM DIMENSIONS.

D. FURNISH AND INSTALL ACCESS DOORS IN DUCTS, WALL AND CEILINGS WHERE ACCESS IS REQUIRED TO CLEAN, TREAT AND COAT THE DUCTWORK.

E. COORDINATE ALL MECHANICAL WORK WITH THE OWNER'S REPRESENTATIVE. ALL MODIFICATIONS TO THE EXISTING ELECTRICAL SHALL BE DONE BY TRADES SPECIALIZING IN THAT WORK.

F. THE MECHANICAL CONTRACTOR SHALL BE RESPONSIBLE FOR PAINTING ANY MECHANICAL AND PLUMBING ITEMS WHICH ARE REQUIRED TO BE FIELD PAINTED. REFERENCE THE REQUEST FOR PROPOSAL (RFP).

G. THESE DOCUMENTS ARE BASED ON ACTUAL CONDITIONS DOCUMENTED DURING DESIGN. THE MECHANICAL CONTRACTOR SHALL NOTIFY THE ENGINEER OF ANY CONDITIONS WHICH VARY FROM THE DOCUMENTS AND BE RESPONSIBLE FOR COORDINATING THE LOCATION OF DUCTWORK WITH EXISTING CONDITIONS.

H. ALL MECHANICAL WORK SHALL COMPLY WITH APPLICABLE STATE & LOCAL BUILDING CODES & REQUIREMENTS.

I. THE MECHANICAL CONTRACTOR SHALL VISIT THE SITE & FAMILIARIZE THEMSELVES WITH EXISTING CONDITIONS WHICH WILL IMPACT CONSTRUCTION OF THIS PROJECT, PRIOR TO SUBMITTING PROPOSALS.

J. ALL INTERRUPTIONS TO SERVICES & ALL WORK IN OCCUPIED SPACES SHALL BE SCHEDULED WITH THE OWNER'S REPRESENTATIVE PER THE SPECIFICATIONS & SHALL BE PERFORMED AT TIMES WHICH ARE ACCEPTABLE TO THE OWNER.

K. COORDINATE THE EXACT LOCATION OF ALL WALL MOUNTED DEVICES WITH THE OWNER'S REPRESENTATIVE.

L. FURNISH ACCESS DOORS FOR INSTALLATION BY THE GENERAL CONTRACTOR WHERE ACCESS IS REQUIRED TO CONCEALED EQUIPMENT.

DRAWING TITLE
MECHANICAL SYMBOLS AND ABBREVIATIONS

DRAWING NO.
M000

I:\3300\3302\m\AHU L5&L3302 MSA.dgn

DRAWING NOTES:

1. REMOVE AHU. ALL PIPING, DUCT, ELECTRICAL AND CONTROLS SERVING THE DEMOLISHED AHU SHALL BE REMOVED AS REQUIRED FOR RECONNECTION. RE: M300.

2. TEMPORARY BYPASS AHU.

3. TEMPORARY BYPASS UNIT SHALL BE CONNECTED TO THE RISERS AS NOTED ON THE ROOF PLAN. FLEX MAY BE USED. REFER TO M500 FOR ISOMETRIC OF DUCT CONNECTIONS. REMOVE ANY DUCTWORK IN THE CHASE NECISSARY TO MAKE CONNECITONS.

4. ONCE THE DUCTWORK AT THE ROOF HAS BEEN CONNECTED TO THE RISERS AND THE FLEXIBLE DUCT HAS CONNECTED THE TEMPORARY BYPASS AHUS TO THE RISERS, THE TEMPORARY AHUS SHALL BE ENERGIZED AND THE AHU SHALL BE DE-ENERGIZED. THE BYPASS AHUS ARE SIZED FOR BOTH AHUS TO SERVICE ONE EXISITNG LAB AHU OR TWO OFFICE AHUS. THE SEQUENCE OF THE UNITS TO BE REPLACES SHALL BE BASED ON CONSTRUCTABILITY AND CONFIRMED WITH UTHSC-H. ALL ISOLATION VALVES SHALL BE SHUT TO THE AHU AND THE AHU SHALL BE REPLACED AS DETAILED ON M300. ON THE LAB UNITS, THE WALL THE TWO UNITS SHARE MUST REMAIN IN PLACE DURING THE FIRST AHU REPLACEMENT. AHU-L5 SHALL BE REPLACED FIRST, THEN AHU-L6. PROVIDE A DEDUCTIVE ALTERNATE DI IF IT CAN BE COORDINATED TO REPLACE BOTH UNITS AT THE SAME TIME.

5. REMOVE EXISTING VSD. REPLACE WITH NEW VSD. REFER TO ELECTRICAL DRAWINGS.

6. PROVIDE A TAP INTO THE EXHUAST DUCT AS NOTED FOR VENTILLATION DURING CUTTING OF THE EXISITNG UNITS. PROVIDE A MANUAL BALANCING DAMPER (LOW LEAK) WITH FLEXIBLE DUCT TO ALLOW FOR MOVEMENT TO WHERE THE CUTTING IS TAKING PLACE. COORDINATE ANY NEEDED SHUT-DOWNS WITH THE OWNER. 12"Φ

7. REMOVE THE EXISTING CONCREETE PAD AND REPOUR. REFER TO STRUCTURAL DRAWINGS FOR FURTHER INFO.

8. REMOVE DUCTWORK AS NOTED FOR REPLACEMENT. EXISITNG FIRE DAMPERS TO REMAIN.

9. EXISINTG LOUVER SERVING THE UNITS. VACUUM, CLEAN AND REPLACE THE BIRDSCREENS.

10. FIELD VERIFY ACTUAL INTERNAL FREE AREA DUCT SIZES. DUCT SIZE SHOWN IS AN ESTIMATE BASED OFF OF FIELD MEASUREMENTS WHERE THE DUCT COULD BE REACHED AND ORIGINAL AS-BUILTS.

11. REMOVE EXISTING PIPING AS REQUIRED TO INSTALL NEW PIPE TO THE NEW UNITS PER THE PIPING DIAGRAMS ON DETAIL SHEET M500.

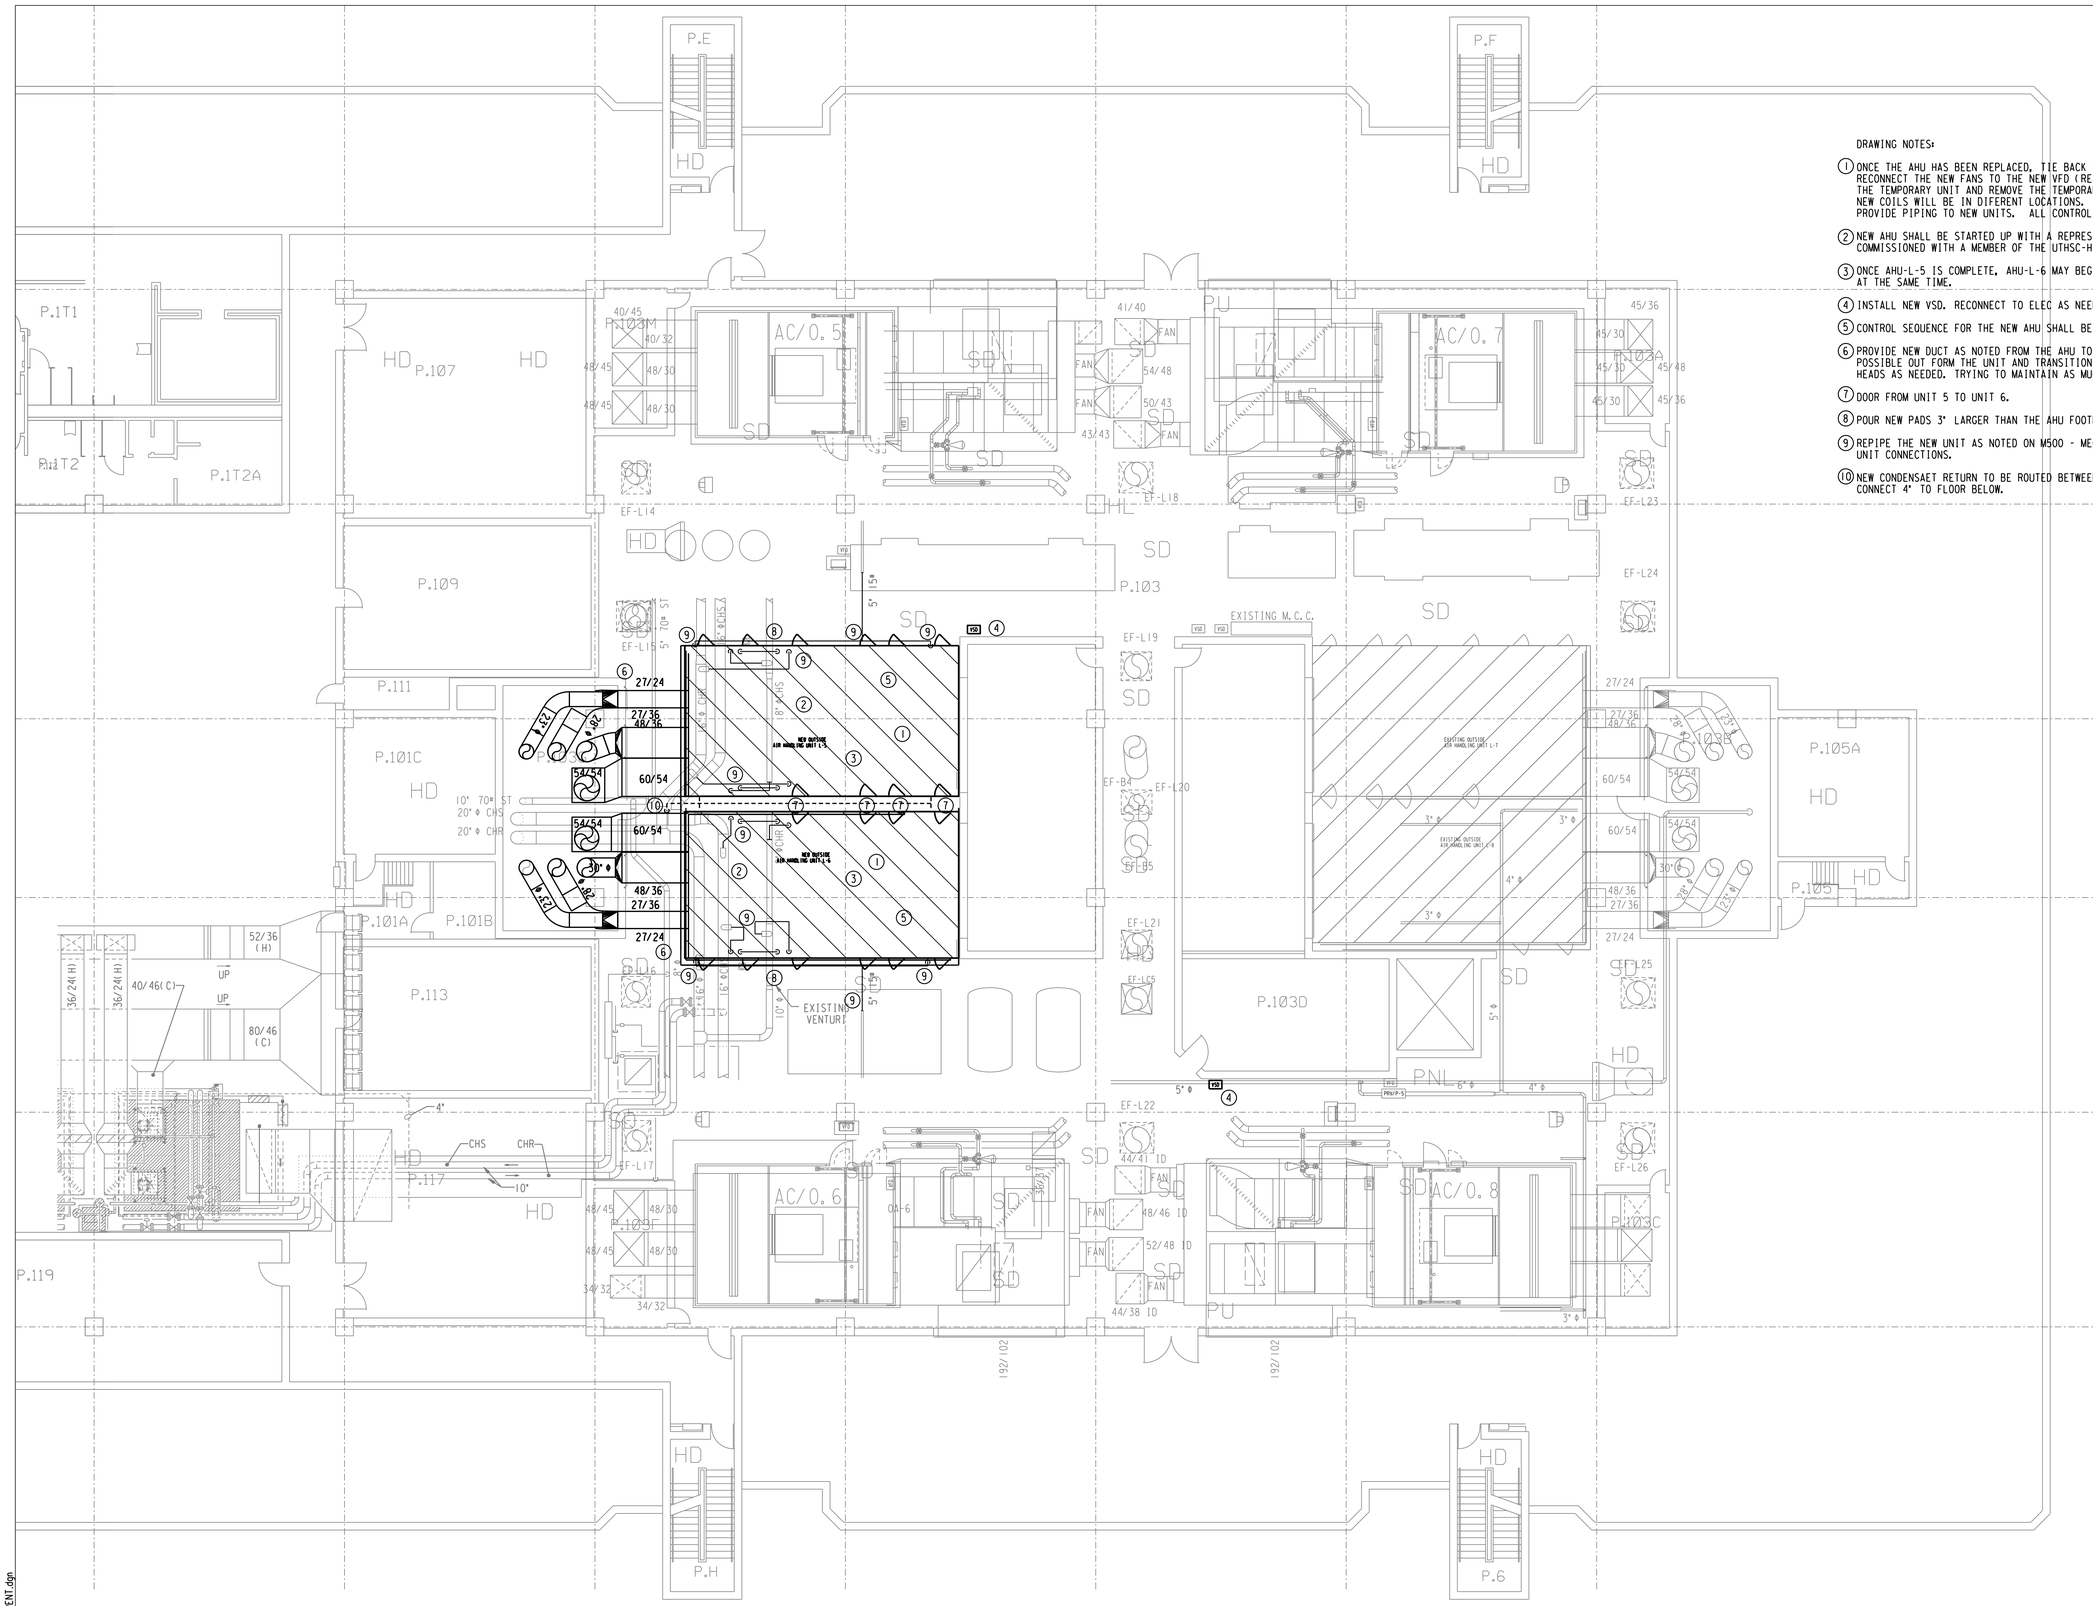
P:\3300\3302\m\AHU L5&L6\3302 MDROOF unit L6 .dgn



DRAWING NOTES:

1. ONCE THE AHU HAS BEEN REPLACED, TIE BACK INTO THE CHILLED WATER, STEAM AND DUCTWORK. RECONNECT THE NEW FANS TO THE NEW VFD (REFER TO ELECTRICAL DRAWINGS) . DE-ENERGIZE THE TEMPORARY UNIT AND REMOVE THE TEMPORARY DUCT FROM THE PLENUM TO THE RISERS AND CAP TO MATCH EXISITNG. NEW COILS WILL BE IN DIFERENT LOCATIONS. ROUTE PIPE THORUGH STRUCTURAL OPENINGS AS NECISSARY TO PROVIDE PIPING TO NEW UNITS. ALL CONTROL VALVING SHALL BE PIPED IN THE UNITS AS NOTED.
2. NEW AHU SHALL BE STARTED UP WITH A REPRESENTATIVE FROM THE FACTORY AND COMMISSIONED WITH A MEMBER OF THE UTHSC-H STAFF IN ATTENDANCE.
3. ONCE AHU-L-5 IS COMPLETE, AHU-L-6 MAY BEGIN. PROVIDE A DEDUCTIVE ALTERNATE FOR REPLACING BOTH UNITS AT THE SAME TIME.
4. INSTALL NEW VSD. RECONNECT TO ELEC AS NEEDED.
5. CONTROL SEQUENCE FOR THE NEW AHU SHALL BE AS NOTED ON DRAWING M600 - CONTROL DIAGRAMS.
6. PROVIDE NEW DUCT AS NOTED FROM THE AHU TO THE CHASE CONNECTION. DUCT SHALL BE AS HIGH AS POSSIBLE OUT FORM THE UNIT AND TRANSITION DOWN TO THE EXISINTG FIRE DAMPER. RELOCATE SPRINKLER HEADS AS NEEDED. TRYING TO MAINTAIN AS MUCH HEAD HEIGHT AS POSSIBLE CLOSE TO THE COLUMNS.
7. DOOR FROM UNIT 5 TO UNIT 6.
8. POUR NEW PADS 3" LARGER THAN THE AHU FOOTPRINT ON EACH SIDE AND 6" TALL. REFER TO STRUCTURAL.
9. REPIPE THE NEW UNIT AS NOTED ON M500 - MECHANICAL DETAILS AND AS REQUIRED FOR LOCATION OF THE NEW UNIT CONNECTIONS.
10. NEW CONDENSAET RETURN TO BE ROUTED BETWEEN UNITS. PENETRATE FLOOR IN THE CHASE BELOW AND CONNECT 4" TO FLOOR BELOW.

DRAWING NOTES:

1. DISCONNECT THE PLENUMS FROM THE RISERS. CAP THE RISERS AIRTIGHT. REMOVE FLEX DUCT FROM THE ROOF AND TURN OVER TO THE OWNER FOR USE ON FUTURE PHASES. IF THE OWNER FINDS THE DUCT UNUSABLE, CONTRACTOR TO DISPOSE.
2. CAP TAPS THROUGH EXTERIOR WALL FOR USE ON FUTURE PHASES.
3. REMOVE THE PLENUM ON TOP OF THE RISERS ON THE ROOF. PATCH THE ROOF TO MATCH EXISITNG. REPLACE CURB AROUND EXISTING EXHAUST DUCT PENETRATION.

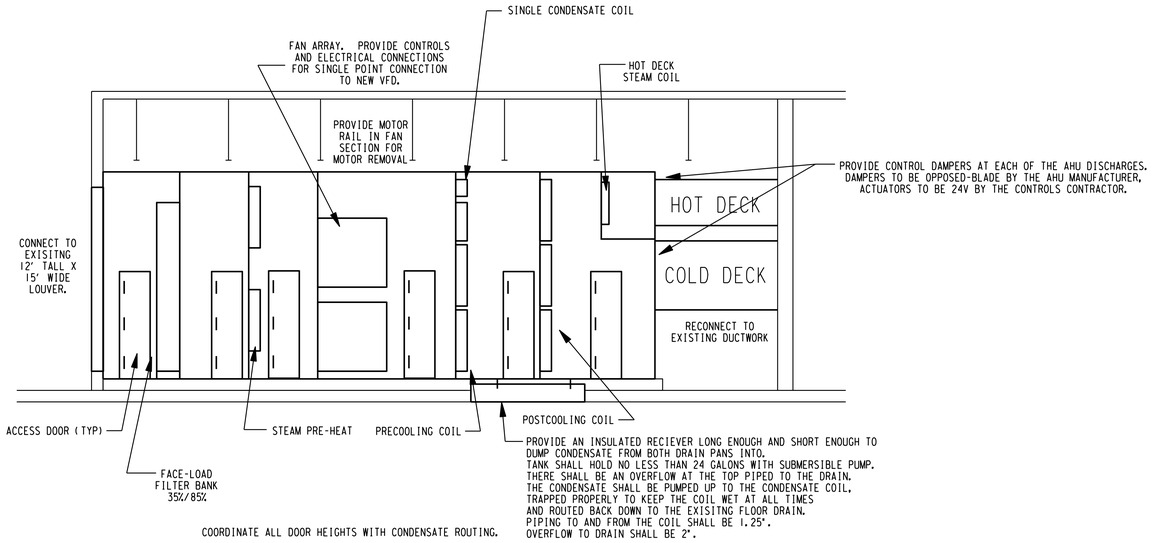
PROVIDE FANS WITH BALANCE STREAM DAMPERS



01 LABORATORY REPLACEMENT UNIT DETAIL W/ CONDENSATE RECOVERY

NOT TO SCALE

ALL LAB UNITS MAXIMUM DIMENSIONS ARE:
14' 0" TALL
36' 0" LONG
18' 6" WIDE

DUCT PENETRATIONS INTO CHASE APPROXIMATE LOCATIONS - FIELD VERIFY:
BOTTOM OF HOTDECK L5 EAST - 10' 8"
BOTTOM OF COLDDECK L5 EAST - 5' 8"
BOTTOM OF HOTDECK L5 WEST - 9' 4"
BOTTOM OF COLDDECK L5 WEST - 4' 2"

BOTTOM OF COLDDECK L6 EAST - 4' 2"
BOTTOM OF HOTDECK L6 EAST - 9' 11"
BOTTOM OF COLDDECK L6 WEST - 5' 8"
BOTTOM OF HOTDECK L6 WEST - 10' 9"

UNIT WILL SIT ON A 6" HOUSEKEEPING PAD.

LAB AHU COIL PIPING IS HOUSED INSIDE THE UNIT.
THERE SHALL BE ONE PIPING INLET TO THE AHU
ON EACH SIDE SERVED FROM THE TOP OF THE UNIT.
THE MANIFOLD SHALL DROP AND COIL
ISOLATION AND BALANCING VALVES SHALL BE
ACCESSED INSIDE THE UNIT.
COILS SHALL BE INTERNALLY DEMOUNTABLE TO BE
REMOVED FROM INSIDE THE UNIT FORWARD AND
OUT THE CLOSEST ACCESS DOOR.

REFER TO THE FLOOR PLANS TO NOTE WHERE DOORS
ARE REQUIRED TO BE ON ONE OR BOTH SIDES OF THE UNIT.

NOTES

UNIT SHALL BE PROVIDED WITH FACTORY INSTALLED JUNCTION BOXES AUXILIARIES, RECEPTACLES, SERVICING LIGHTS, ETC. RE: ELECTRICAL DRAWINGS FOR FURTHER INFORMATION.

FACTORY INSTALLED JUNCTION BOXES ARE FOR CONNECTION BY DIVISION 26. DIVISION 26 IS NOT TO PENETRATE AIR HANDLING UNIT HOUSING. WIRING FROM JUNCTION BOX TO LOAD INSIDE AIR HANDLING UNIT SHALL BE BY THE MANUFACTURER.

ALL POWER WIRING BETWEEN VARIABLE FREQUENCY DRIVES, MOTOR CONTROLLERS AND MOTORS SHALL BE COMPLETED BY THE AIR HANDLING UNIT MANUFACTURER.

INFORMATION SHOWN IS PER UNIT.

PROVIDE WITH BALANCE STREAM DAMPERS ON FANS

COIL SCHEDULE - CONDENSATE

AIR HANDLING UNIT

A. This unit shall be a medium pressure, dual duct, blow-through unit serving multiple dual duct boxes. The unit shall consist of a mixing box, 30%/85% filter bank, a steam preheat coil, fan array section, pre and post cooling coils and a dual duct section with steam heating coils.

B. When the VFD - H-O-A switch is in automatic, the BAS system shall start and stop the supply fan by way of a signal to the VFD control input port. When the switch is in hand, the supply fan shall start and run at the set speed. When in the bypass mode the fan shall start and run at full speed.

C. For the supply fans to start in either hand or automatic, the following permissives shall be satisfied:

1. the smoke detector in the unit discharge.
2. supply air duct high pressure switch is closed indicating a safe operating condition.
3. the door switch is closed.

D. When the supply fan array is off, the heating coils and chilled water valves shall be closed to the coils, except in freeze protection mode. In freeze protection mode, the preheat coil valves shall be open when the outdoor temperature is under 36 degrees.

E. Upon a signal to start the fan array, the fan array shall be energized and ramp up to control speed through the VFD to maintain the riser pressure requiring the highest speed to achieve the static pressure setpoint (Owner adjustable setpoint).

F. When the supply fan array is operating, the preheating and chilled water valve shall modulate to maintain the desired leaving air conditions. The discharge conditions for the cold deck shall be set for a dewpoint no greater than 53 degrees and dry bulb no less than 51 degrees. The preheat and cooling coil control valves shall not be open at the same time.

1. When inlet air temperature entering the AHU is below 65 degrees F (owner adjustable), the normally-open two-position valve located in the return piping for the pre cooling coil shall close, while the normally-closed bypass two-position valve shall open allowing chilled water to flow through the post-cooling coil only. Once the outside air temperature rises above the setpoint, the valves shall actuate to normal positions.

G. The discharge conditions for the hot deck shall be set for a dry bulb no greater than 97 degrees.

H. Condensate pump controls:

1. A condensate pump shall operate to flow condensate through a coil. The trap shall be sized to keep the coil wet. When the condensate collection basin float switch rises to the "pump on" setpoint, the condensate pump shall turn on to flow condensate through the coil.
2. When the basin float lowers below the shut-off setpoint, the pump shall be de-energized.
3. If at any time the float rises above a high-limit point, the two-position drain valve shall open to dump to drain until the float lowers back below the "pump on" setpoint.
4. If the temperature of the condensate rises above 75 degrees, the overflow valve shall open and the condensate shall dump to drain. Once the float is to the "pump off" low limit, the valve shall close and the basin will begin to fill again.

I. A current sensing relay shall independently indicate status of each of the supply fans. Status shall be input to the BAS system and to the fire alarm system.

J. The filter bank shall have an adjustable differential pressure switch to indicate high differential pressure across the filters. The switch shall be an alarm input to the BAS system.

K. The supply air duct shall have a pressure sensor to indicate duct static pressure at the discharge of the unit on both the hot and cold decks. The pressure sensor shall provide an input to the BAS system.

L. The supply air duct shall have an adjustable pressure switch to indicate high pressure downstream of the fan and a low pressure switch upstream of the fan. The switches shall be an alarm input to the BAS system and shall be an interlock for the supply air fan.

M. There shall be a discharge smoke detector interlocked with the fire alarm system to shut the system down in the event of smoke in the fan discharge.

N. There shall be a low temperature limit switch that shall be before the inlet of the cooling coil. Upon a signal from the switch that the temperature is below 35 degrees, the outside air damper shall shut and an alarm shall be sent to the BAS. If the temperature remains below the limit of 35 degrees for more than 1 minute after the outside air damper is shut, the fan shall be de-energized and the cooling coil shall open fully to circulate water to avoid freezing the coil.

O. There shall be a door switch on the fan section. When the door switch is open, the fan shall be de-energized for safety.

P. There shall be a door switch on the cooling coil section. When the door switch is open, the UV lights shall be de-energized for safety. Otherwise, the UV lights shall be on if the AHU is operational.

Q. There shall be a contractor-provided Nutech venture flowmeter installed in the chilled water supply or return line with high and low pressure points (contractor option based on ease of installation). Controls contractor to connect to the ports and provide flow to the BAS.

If Alternate A1 is selected, the risers will be set with a minimum and maximum SP setpoint. Once the worst case riser is satisfied to the minimum SP setpoint, the dampers at the unit discharge will operate to maintain static pressure between the minimum and maximum for that riser.

W/	WITH
W/O	WITHOUT
WB	WET BULB
WC	WATER CLOSET
WCO	WALL CLEANOUT
WH	WATER HEATER, WALL HYDRANT
WM	WATER METER
WP	WEATHERPROOF
WPD	WATER PRESSURE DROP
WS	WATER SOFTENER
WT	WATERTIGHT, WEIGHT
WWF	WELDED WIRE FABRIC
XFMR	TRANSFORMER
XP	EXPLOSION PROOF
Z	ZONE
ZV	ZONE VALVE

ELECTRICAL SYMBOLS (ALL SYMBOLS SHOWN ARE NOT NECESSARILY USED ON THE DRAWINGS)

ONE LINE/RISER DIAGRAMS

- TRANSFORMER, TYPE AND RATINGS AS NOTED
- 800A/3P — SWITCH, RATING AS SHOWN
- 400A — FUSE, RATING AS SHOWN
- 225A/3P — CIRCUIT BREAKER, RATINGS AS SHOWN, 3 POLE UNLESS NOTED OTHERWISE
- 2000A/3P — DRAWOUT CIRCUIT BREAKER, RATINGS AS SHOWN, 3 POLE UNLESS NOTED OTHERWISE
- ST — SHUNT TRIP
- GFR — GROUND FAULT RELAY
- K — KIRK-KEY INTERLOCK
- A 0-2000 — AMMETER, RANGE AS SHOWN
- AS — AMMETER SWITCH
- V 0-600 — VOLTMETER, RANGE AS SHOWN
- VS — VOLTMETER SWITCH
- M — FULL FUNCTION METER
- 1200/5 — CURRENT TRANSFORMER, RATED AS SHOWN
- 12.47kV/120V — POTENTIAL TRANSFORMER, RATING AS SHOWN
- GROUND CONNECTION
- LIGHTNING ARRESTOR
- G — GENERATOR SET
- AUTOMATIC TRANSFER SWITCH
- HOA OR SS AS NOTED

FIRE ALARM

- FACP — FIRE ALARM CONTROL PANEL (FLUSH/SURFACE)
- FAAP — FIRE ALARM REMOTE ANNUNCIATOR (FLUSH/SURFACE)
- AV — FIRE ALARM AUDIO VISUAL SIGNAL, WALL MOUNTED
- V — FIRE ALARM VISUAL SIGNAL, WALL MOUNTED
- A — FIRE ALARM AUDIO SIGNAL, WALL MOUNTED
- A — FIRE ALARM CEILING SPEAKER
- H — HEAT DETECTOR
- S — AREA SMOKE DETECTOR
- S, L — AREA SMOKE DETECTOR WITH LOCAL ALARM
- D, RA — DUCT SMOKE DETECTOR, 'RA' DENOTES RETURN AIR, 'SA' DENOTES SUPPLY AIR
- RI — SMOKE DETECTOR REMOTE INDICATOR STATION
- FIREFIGHTER'S COMMUNICATION JACK
- W — STAIRWAY EMERGENCY TELEPHONE
- ES — ELEVATOR LOBBY EMERGENCY SIGN
- F — FIRE ALARM MANUAL PULL STATION
- FJ — FIRE ALARM MANUAL PULL STATION WITH FIREMAN'S JACK
- WF — SPRINKLER WATER FLOW SWITCH
- VS — VALVE SUPERVISORY SWITCH
- DH — MAGNETIC DOOR HOLDER
- ELECTRIC DOOR LOCK
- R — FIRE ALARM RELAY
- HCP — HALON CONTROL PANEL

COMMUNICATIONS

- NEW VOICE WALL OUTLET. 'W' DENOTES WALL PHONE HEIGHT. 'P' DENOTES PAY PHONE. DOT INDICATES ABOVE COUNTER
- E — EXISTING VOICE WALL OUTLET TO REMAIN
- R — EXISTING VOICE WALL OUTLET TO BE REMOVED
- NEW DATA WALL OUTLET
- R — RELOCATED EXISTING DATA WALL OUTLET
- EXISTING DATA WALL OUTLET TO REMAIN
- R — EXISTING DATA WALL OUTLET TO BE REMOVED AND REUSED AS APPLICABLE
- COMBINATION VOICE/DATA WALL OUTLET
- ICM — INTERCOM MASTER STATION
- ICS — INTERCOM STAFF STATION
- ICP — INTERCOM EQUIPMENT PANEL
- S — CEILING MOUNTED SPEAKER
- S — PAGING HORN
- M — PAGING SYSTEM MICROPHONE
- PATC — PAGING SYSTEM TERMINAL CABINET

LIGHTING/SWITCHES

- A, B — NEW INCANDESCENT OR HID LIGHTING FIXTURE, LETTER DENOTES TYPE, 'H' PREFIX DENOTES HID
- RELOCATED EXISTING INCANDESCENT OR HID LIGHTING FIXTURE. LETTER DENOTES TYPE WHERE APPLICABLE
- EXISTING INCANDESCENT OR HID LIGHTING FIXTURE TO REMAIN
- EXISTING INCANDESCENT OR HID LIGHTING FIXTURE TO BE REMOVED AND REUSED AS APPLICABLE
- X — NEW EXIT SIGN, ARROWS AS INDICATED, LETTER DENOTES TYPE
- R — RELOCATED EXISTING EXIT SIGN, ARROWS AS INDICATED
- EXISTING EXIT SIGN TO REMAIN, ARROWS AS INDICATED
- R — EXISTING EXIT SIGN TO BR REMOVED AND REUSED AS APPLICABLE
- FB — NEW FLUORESCENT LIGHTING FIXTURE, LETTER DENOTES TYPE, 'F' PREFIX DENOTES FLUORESCENT
- R, FB — RELOCATED EXISTING FLUORESCENT LIGHT FIXTURE, LETTER DENOTES TYPE WHERE APPLICABLE
- FB — EXISTING FLUORESCENT LIGHT FIXTURE TO REMAIN
- R, FB — EXISTING FLUORESCENT LIGHT FIXTURE TO BE REMOVED AND REUSED AS APPLICABLE
- LIGHT FIXTURE ON EMERGENCY CIRCUIT
- $ — NEW SWITCH, SPST, 20A, 120/277V
- $R — RELOCATED EXISTING SWITCH
- $ — EXISTING SWITCH TO REMAIN
- $R — EXISTING SWITCH TO BE REMOVED AND REUSED AS APPLICABLE
- $3 — SWITCH, 20A, 120/277V, '2' DENOTES DPST, '3' DENOTES THREE-WAY, '4' DENOTES FOUR-WAY
- $L — SWITCH, SPDT, CENTER OFF, MOMENTARY CONTACT, 'L' DENOTES TOGGLE, 'LR' DENOTES ROCKER
- $K — SWITCH, SPST, 20A, 120/277V. 'K' DENOTES KEY SWITCH, 'P' DENOTES PILOT LIGHT, 'T' DENOTES SPRING WOUND TIMER, 'M' DENOTES MOTION DETECTOR
- DIMMER CONTROL SWITCH, 1000 WATT UNLESS OTHERWISE NOTED

RECEPTACLES/OUTLETS

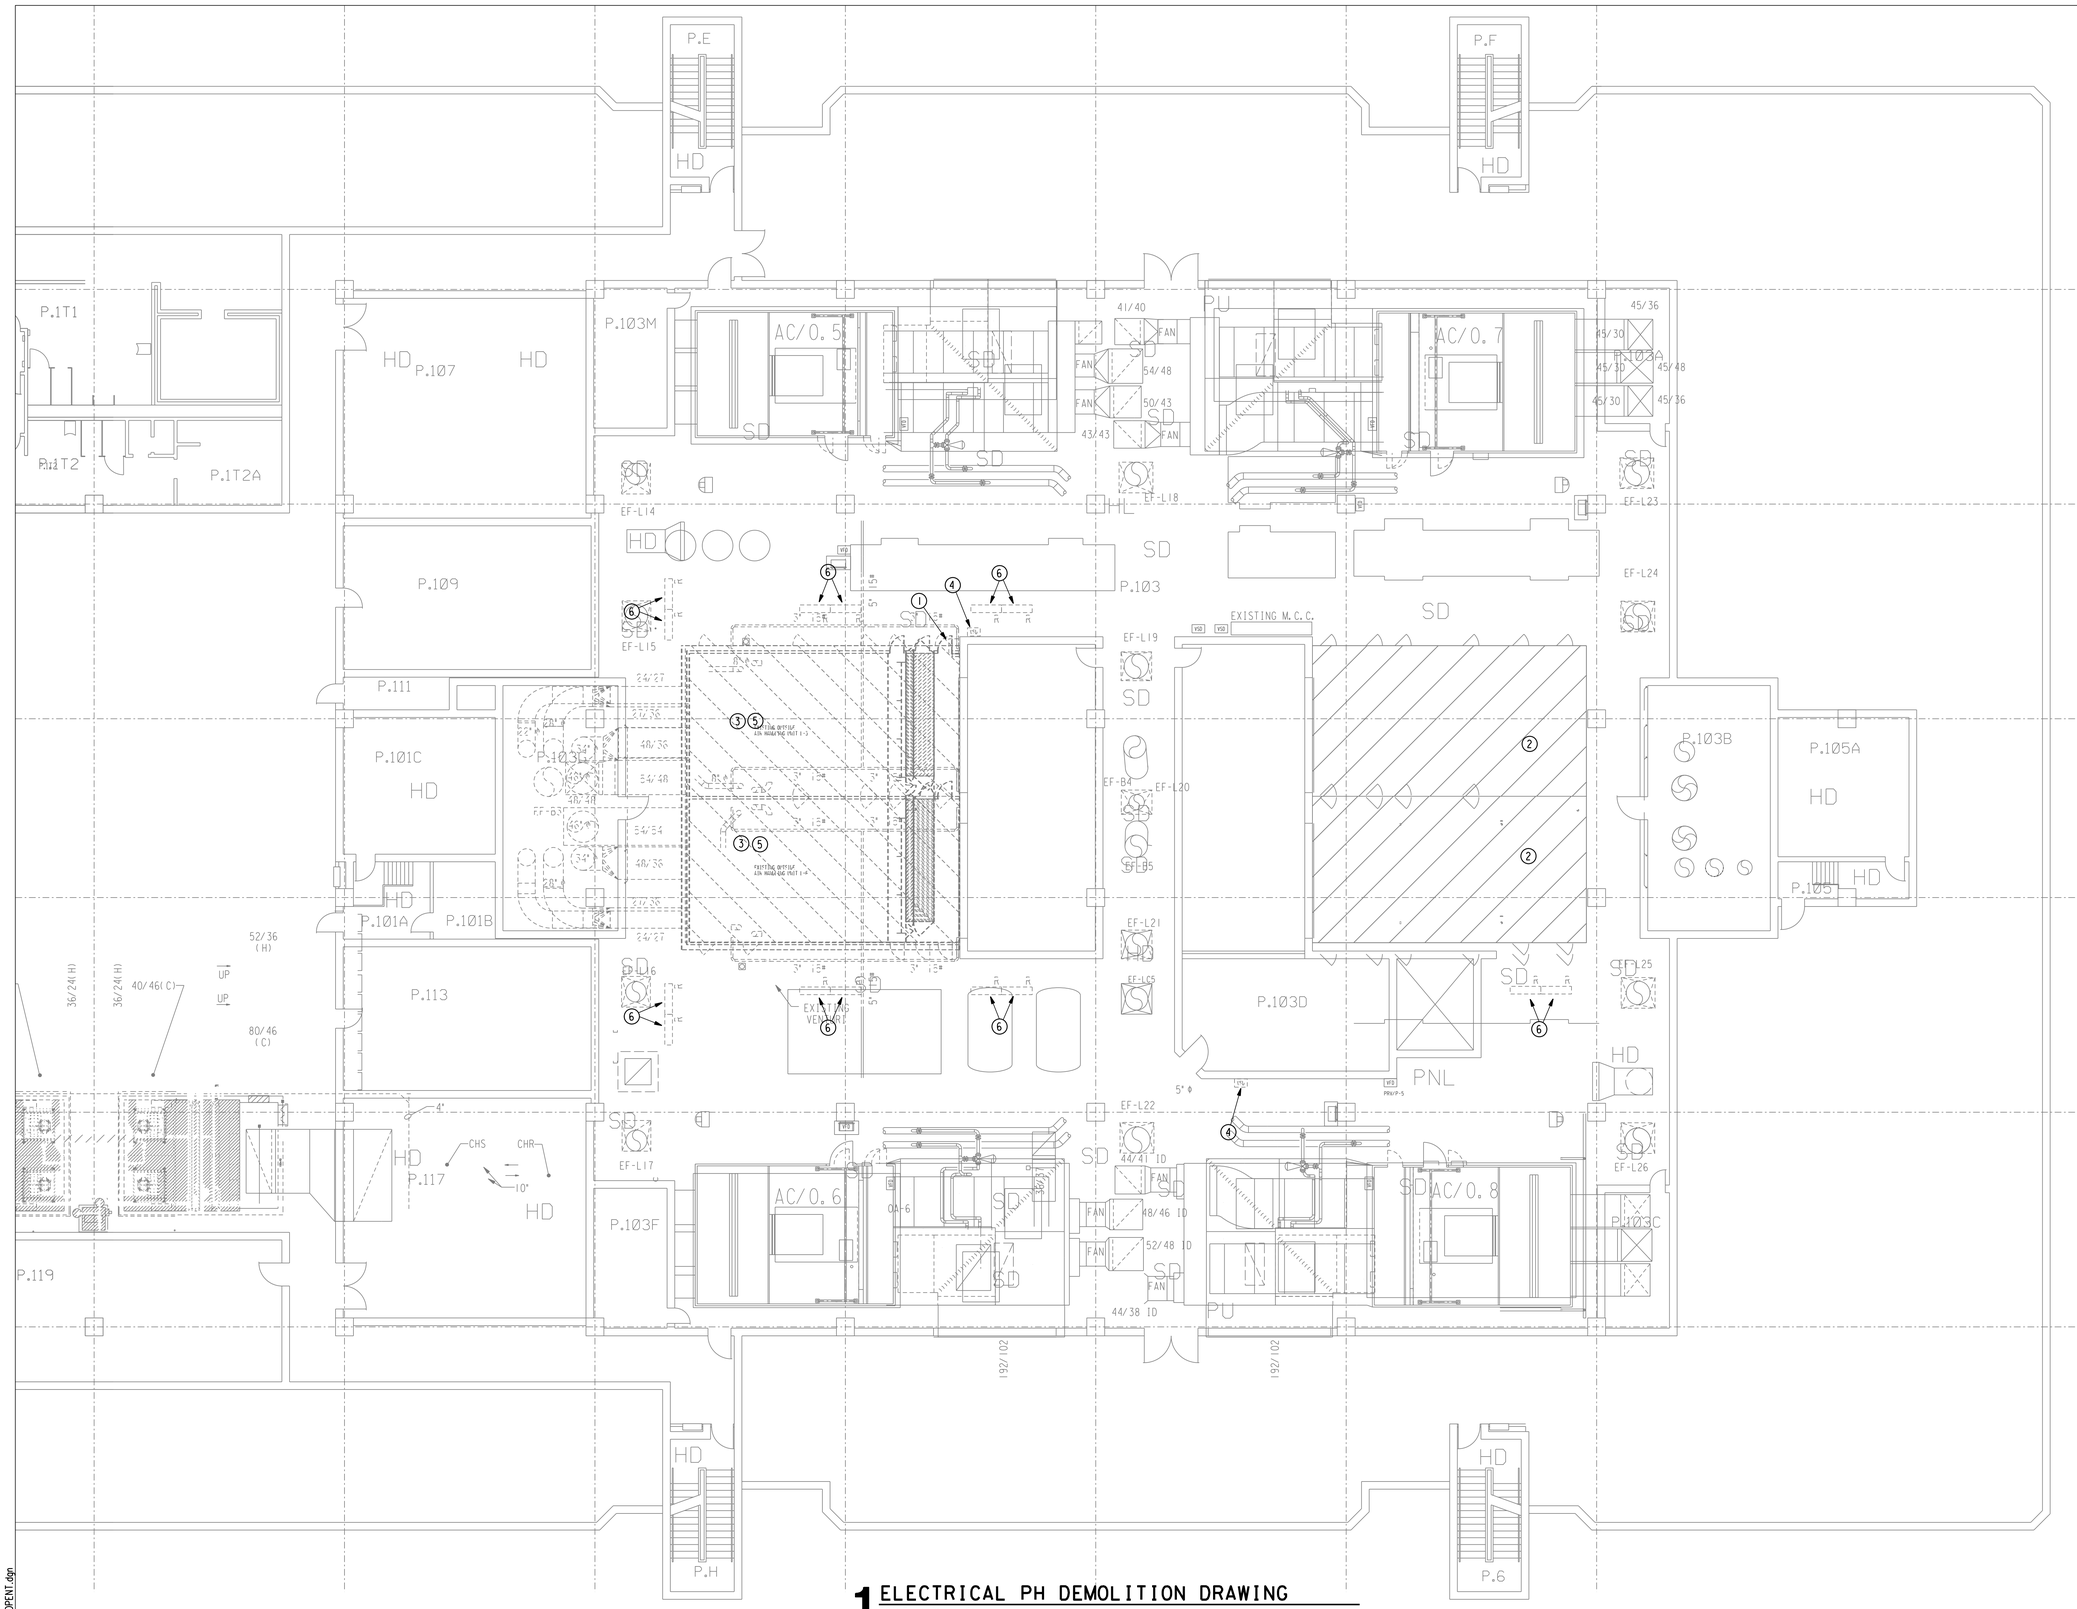
- SIMPLEX WALL RECEPTACLE. NEMA 5-20R, 20A, 125V
- NEW DUPLEX WALL RECEPTACLE, NEMA 5-15R, 15A, 125V OR NEMA 5-20R, 20A, 125V. RE: SPECIFICATIONS. DOT INDICATES ABOVE COUNTER
- R — RELOCATED EXISTING DUPLEX RECEPTACLE
- EXISTING DUPLEX RECEPTACLE TO REMAIN
- R — EXISTING DUPLEX RECEPTACLE TO BE REMOVED AND REUSED AS APPLICABLE
- DUPLEX WALL RECEPTACLE ON EMERGENCY CIRCUIT, RED COLOR
- DUPLEX WALL RECEPTACLE ON A CIRCUIT DEDICATED TO DATA PROCESSING, GRAY COLOR. PROVIDE ISOLATED GROUND TYPE RECEPTACLES WHERE NOTED WITH IG.
- WP — DUPLEX WALL RECEPTACLE, 'WP' DENOTES WEATHERPROOF. 'TP' DENOTES SAFETY TYPE.
- FOURPLEX WALL RECEPTACLE. NEMA 5-15R, 15A, 125V OR NEMA 5-20R, 20A, 125V. RE: SPECIFICATIONS.
- C — CLOCK OUTLET. NEMA 15-20R SIMPLEX, RE: SPECS
- SPECIAL RECEPTACLE, NEMA CONFIGURATION AS NOTED
- PA — FLOOR OUTLET. 'P' DENOTES POKE-THRU, 'F' DENOTES FLUSH, 'A' DENOTES TYPE WHERE APPLICABLE.
- MULTI-OUTLET SURFACE RACEWAY
- J — JUNCTION BOX
- DIRECT CONNECTION TO EQUIPMENT
- P — PULL BOX (OVER 4' SQUARE)
- TENANT LIGHTING JUNCTION BOX
- TENANT POWER JUNCTION BOX

ELECTRICAL EQUIPMENT/CIRCUITING

- DISTRIBUTION PANEL
- SWITCHBOARD OR MOTOR CONTROL CENTER
- NEW PANELBOARD (FLUSH/SURFACE MOUNT)
- EXISTING PANELBOARD
- DRY-TYPE TRANSFORMER
- ATS — AUTOMATIC TRANSFER SWITCH
- PLYWOOD TERMINAL BOARD, TYPE AS NOTED, 4' X 8' X 3/4", UNLESS NOTED OTHERWISE
- TERMINAL CABINET (FLUSH/SURFACE MOUNT), TYPE AS NOTED, 24"x48"x3 1/2", UNLESS NOTED OTHERWISE.
- BAT — BATTERY/INVERTER UNIT
- CIRCUIT CONCEALED IN WALL OR CEILING
- CIRCUIT CAST IN CONCRETE OR BELOW SLAB
- EXPOSED CONDUIT
- CONDUIT TURNED UP
- CONDUIT TURNED DOWN
- HASH MARKS INDICATE NUMBER OF CONDUCTORS PHASE/NEUTRAL/SWITCH LEG/GROUND LEFT TO RIGHT. NO HASH MARKS INDICATES 2#12. UNLESS OTHERWISE NOTED.
- 1LA-2, 4 — HOMERUN TO PANEL WITH CIRCUIT NUMBER(S) AS INDICATED.
- 1LA-6 — PARTIAL CIRCUIT HOMERUN TO PANEL
- T — COMMUNICATIONS CONDUIT OR CABLE. 'V' DENOTES VOICE, 'D' DENOTES DATA, 'I' DENOTES INTERCOM, 'PA' DENOTES PAGING, 'S' DENOTES SECURITY, 'FA' DENOTES FIRE ALARM
- SINGLE OR THREE PHASE MOTOR
- ELECTRIC DUCT HEATER
- DISCONNECT (SAFETY) SWITCH '200/3/150' DENOTES AMPERES/POLE/FUSE, 'NF' DENOTES NON-FUSED
- ENCLOSED CIRCUIT BREAKER
- MOTOR STARTER
- MOTOR STARTER FURNISHED WITH EQUIPMENT
- COMBINATION DISCONNECT (SAFETY) SWITCH AND MOTOR STARTER. '30/3/15/*0' DENOTES AMPERES/POLES/FUSE/STARTER SIZE. 'NF' DENOTES NON-FUSED.
- COMBINATION DISCONNECT (SAFETY) SWITCH AND MOTOR STARTER FURNISHED WITH EQUIPMENT
- MS — MANUAL MOTOR STARTING WITH THERMAL OVERLOAD
- T — MOTOR-RATED TOGGLE SWITCH
- C — LIGHTING CONTACTOR
- TS — TIME SWITCH
- PC — PHOTOCELL
- PUSH BUTTON
- DC — DOOR CONTACT SWITCH

PANEL DESIGNATIONS

2HEA-3 — '2' DENOTES FLOOR WHERE PANEL IS LOCATED; 'H' DENOTES VOLTAGE - 'H' = 480Y/277V, 'L' = 208Y/120V; 'E' DENOTES SYSTEM TYPE - BLANK = NORMAL POWER, E=EMERGENC



1 ELECTRICAL PH DEMOLITION DRAWING

SCALE: 1/8" = 1'-0"

GENERAL NOTES:

A. RE: E000 FOR MORE GENERAL NOTES, SYMBOLS, AND ABBREVIATIONS.

DRAWING NOTES:

1. RELOCATE FIRE ALARM PANEL TO PROVIDE ACCESS FOR INSTALLATION OF THE NEW UNITS.
2. EXISTING MECHANICAL UNIT TO REMAIN.
3. EXISTING MECHANICAL UNIT TO BE REMOVED AND REPLACED WITH SAME HORSEPOWER NEW UNIT. RE: MECHANICAL PLANS FOR MORE INFORMATION ON SCOPE OF MECHANICAL WORK. EXISTING POWER AND CIRCUITING FOR MOTOR TO REMAIN AND BE RECONNECTED TO NEW UNIT. RE: ELECTRICAL RENOVATION PLAN FOR MORE INFORMATION.
4. EXISTING VSD DRIVES TO BE REMOVED. DRIVES SERVE EXISTING MECHANICAL EQUIPMENT THAT IS BEING REPLACED. REMOVE DRIVES AND MAINTAIN CIRCUITING FROM PANEL SERVING AND TO EQUIPMENT FOR RECONNECTING TO NEW DRIVES AND NEW EQUIPMENT. RE: ALTERATION PLAN FOR MORE INFORMATION.
5. EXISTING 120V CIRCUIT SERVING UNIT LIGHTING AND RECEPTACLES SHALL BE DISCONNECTED AND REMAIN FOR RECONNECTION TO NEW UNIT. RE: ALTERATION PLAN FOR MORE INFORMATION.
6. EXISTING LIGHT FIXTURE TO BE REMOVED AND REPLACED WITH NEW FIXURE. ALL EXISTING CIRCUITING AND SWITCHING SHALL REMAIN.

DRAWING TITLE
ELECTRICAL PH DEMOLITION DRAWING

DRAWING NO.
E108

I:\3300\3302\m\AHU L5&L6\3302 EDPENT.dgn

GENERAL NOTES:

A. RE: E000 FOR MORE GENERAL NOTES, SYMBOLS, AND ABBREVIATIONS.

B. TYPE A: LENSED LED STRIP LIGHT, 4 FEET LONG, 3500K, MEDIUM LUMEN OUTPUT, FIXED OUTPUT DRIVER, UNIVERSAL VOLTAGE BALLAST, CHAIN HANGER ACCESSORY. COLUMBIA LIGHTING * LCL4-35ML-EU-CSHC OR EQUAL BY COOPER, LITHONIA, OR OTHERS.

C. TYPE B: JUNCTION BOX MOUNTED LED FIXTURE, MOUNTED TO COLUMN, FROSTED GLASS GLOBE, ALUMINUM HOUSING, 5000 K, HUBBELL INDUSTRIAL * VL15PIG-VBLUI5 OR EQUAL BY COOPER, LITHONIA, OR OTHERS.

DRAWING NOTES:

1. NO WORK AT THIS UNIT.
2. EXISTING MECHANICAL UNIT TO REMAIN.
3. NEW MECHANICAL UNIT OF SAME HORSEPOWER AS EXISTING UNIT TO BE RECONNECTED. RE: MECHANICAL PLANS FOR MORE INFORMATION ON SCOPE OF MECHANICAL WORK. EXISTING POWER AND CIRCUITING FOR MOTOR TO REMAIN AND BE RECONNECTED TO NEW UNIT. EXTEND EXISTING CIRCUITING AS REQUIRED.
4. NEW VSD DRIVES FOR NEW EQUIPMENT. NEW DRIVES SERVE NEW MECHANICAL EQUIPMENT. RECONNECT CIRCUITING FROM PANEL SERVING AND TO NEW EQUIPMENT AS REQUIRED.
5. EXISTING HOMERUN TO REMAIN. CAPTURE HOMERUN AND CIRCUIT TO NEW VSD AND MECHANICAL EQUIPMENT AS REQUIRED IN NOTES 3 AND 4.
6. EXISTING 120V CIRCUIT SERVING UNIT LIGHTING AND RECEPTACLES SHALL BE RECONNECT TO NEW UNIT. NO MORE THAN 1440 WATTS ON A CIRCUIT.
7. NEW LIGHT FIXTURE TO REPLACE EXISTING FIXTURE. ALL EXISTING CIRCUITING AND SWITCHING SHALL REMAIN. RE: GENERAL NOTES FOR TYPE.
8. NEW LIGHT FIXTURE. EXTEND EXISTING CIRCUITING AND SWITCHING TO SERVE NEW FIXTURE. CHAIN HANG FIXTURE AT SAME ELEVATION AS EXISTING FIXTURES. NO MORE THAN 3000 WATTS ON A CIRCUIT. RE: GENERAL NOTES FOR TYPE.
9. NEW LIGHT FIXTURE. EXTEND EXISTING CIRCUITING AND SWITCHING TO SERVE NEW FIXTURE. SURFACE MOUNT FIXTURE AT 8 FEET A.F.F. NO MORE THAN 3000 WATTS ON A CIRCUIT. RE: GENERAL NOTES FOR TYPE.
10. RELOCATED FIRE ALARM PANEL

I:\3300\3302\vn\AHU L5&L3302 EPENT.dgn

GENERAL NOTES

I. DESIGN CRITERIA

A. GENERAL BUILDING CODE

1. The Documents are based on the requirements of the International Building Code 2012.
2. Hanging Ceiling and Mechanical Loads: An allowance of 20 PSF has been made for hanging ceiling and mechanical equipment loads such as duct work and sprinkler pipes.

B. LIVE LOADS

1. Design live loads are based on the more restrictive of the uniform load listed below or the concentrated load listed acting over an area 2.5 feet.
   a. Roofs: 20 PSF
2. Reduction of Live Loads:
   a. Live loads have been reduced using the standard procedure from the building code.

C. WIND LOADS

1. Wind pressures are based on the provisions of the American Society of Civil Engineers, Minimum Design Loads for Buildings and Other Structures, ASCE 7-10 and the following criteria:
   a. Ultimate design wind speed (Vult): 139 MPH (3 second gust)
   b. Building risk category: II
   c. Wind exposure category: B

   Notes:
   a. Pressures act normal to the surface. Positive pressures act towards the surface and negative pressures act away from the surface.
   b. Design pressure for components and cladding shall not be less than 16 PSF acting in either direction normal to the surface.
   c. The design pressures listed above are calculated using a value of Kd of 0.85. The values must be increased by 18% unless load combinations specified in ASCE 7-10 are used in design.

II. NON-DESTRUCTIVE EVALUATION

A. ITEMS EMBEDDED IN CONCRETE STRUCTURES

1. Items embedded in concrete structures shall not be damaged during repair work or installation of new members requiring post-installed anchors. Embedded items may include mild reinforcement, prestressing reinforcement, dowels, embedded connections, electrical conduits, plumbing, etc.
2. Items embedded in concrete shall be located by non-destructive evaluation prior to performing any work. Contractor shall mark on the structure the location of embedded prior to coring in concrete.
3. Contractor shall not start fabrication of new members until items embedded in concrete have been located. Contact Engineer if existing embedded items interfere with location of post-installed anchors specified in drawings.

III. SELECTIVE DEMOLITION

A. RESPONSIBILITY OF THE CONTRACTOR FOR STABILITY OF THE STRUCTURE DURING DECONSTRUCTION / DEMOLITION

1. It is the responsibility of the Contractor to maintain the stability and safety of all structural elements during the demolition process.

B. MATERIAL OWNERSHIP

1. Except for items or materials indicated to be reused, salvaged, or otherwise indicated to remain Owner's property, demolished materials shall become Contractor's property and shall be removed from Project site. The materials removed shall be disposed in a proper and legal manner per federal/state or local ordinances.

C. QUALITY ASSURANCE

1. Demolition Firm Qualifications: An experienced firm that has specialized in demolition work similar in material and extent to that indicated for this Project.
2. Regulatory Requirements: Comply with governing Owner, Local, State, Federal, and EPA notifications and regulations before beginning selective deconstruction / demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.

D. PROJECT CONDITIONS

1. Conduct selective demolition so Owner's operations will not be disrupted. Provide not less than 72-hour notice to Owner of activities that will affect Owner's operations.
2. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities. Do not close or obstruct walkways, corridors, or other occupied or used facilities without written permission from authorities having jurisdiction.
3. Owner assumes no responsibility for condition of areas to be selectively demolished.
   a. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.
   b. Before selective demolition, Owner will remove items within space as needed.
4. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Engineer and Owner. These materials shall be removed as disposed as approved by governing agency.
5. Storage or sale of removed items or materials on-site will not be permitted.
6. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations. Maintain fire-protection facilities in service during selective demolition operations.
7. All areas outside of demolition scope to be protected from damage by contractor. Restore areas subject to incidental damage to their pre-demolition condition.

E. PREPARATION

1. Dangerous Materials: Drain, purge, or otherwise remove, collect, and dispose of chemicals, gases, explosives, acids, flammables, or other dangerous materials before proceeding with selective demolition operations.
2. Temporary Facilities: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
   a. Provide protection to ensure safe passage of people around selective demolition area and to and from occupied portions of adjacent facilities.
3. Temporary Partitions: Erect and maintain dustproof partitions and temporary enclosures to limit dust and dirt migration and to separate areas from fumes and noise.
4. Temporary Shoring: Provide and maintain interior and exterior shoring, bracing, or structural support to preserve stability and to prevent unexpected or uncontrolled movement or collapse of construction being demolished. Strengthen or add temporary supports when required during progress of selective demolition.

F. EXECUTION OF SELECTIVE DEMOLITION

1. General: Demolish existing construction as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:
   a. Use cutting methods least likely to damage construction to remain or adjoining construction.
   b. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces verify condition and contents of hidden space before starting flame-cutting operations. Maintain fire watch and portable fire-suppression devices during flame-cutting operations.
   c. Maintain adequate ventilation when using cutting torches.
   d. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, slabs, or framing.
   e. Dispose of demolished items and materials promptly.
2. Existing Facilities: Comply with Owner's requirements for using and protecting other building facilities during selective demolition operations.

G. DISPOSAL OF DEMOLISHED MATERIALS

1. General: Promptly dispose of demolished materials. Do not allow demolished materials to accumulate on-site.
2. Burning: Do not burn demolished materials.
3. Disposal: Transport demolished materials off Owner's property and legally dispose of them.

IV. CONCRETE

A. CONCRETE REPAIR MATERIALS

1. Concrete shall conform to the following requirements:

Classes of Concrete Matrix							
Location	Comp Strength PSI	Type	Exposure Class	Max W/C Ratio	Air Content	Max Agg. Size (in.)	Notes
Housekeeping Pads	3,000	LWC	-	0.45	-	3/4	
Infill	4,000	NWC	C1	0.45	-	1	

B. HORIZONTAL CONSTRUCTION JOINTS IN CONCRETE POURS

1. There shall be no horizontal construction joints in any concrete pours unless shown on the drawings. The Engineer shall approve all deviations or additional joints in writing.

C. REINFORCING STEEL

1. All Reinforcing Steel shall be ASTM A 615 Grade 60 unless noted otherwise on the drawings or in these notes.
2. Deformed Welded Wire Reinforcement: ASTM A 497, yield strength 70,000 PSI.

D. PLACEMENT OF WELDED WIRE REINFORCEMENT

1. Wherever welded wire reinforcement is specified as reinforcement, it shall be continuous across the entire concrete surface [and not interrupted by beams or girders] and properly lapped per ACI 318, 12.18 and 12.19.

E. REINFORCEMENT IN TOPPING SLABS

1. Provide minimum reinforcement as noted below in all topping slabs unless specified otherwise on the drawings.
   a. Welded smooth wire reinforcement 6x6-W2.9xW2.9.

F. REINFORCING STEEL COVERAGE

1. Reinforcing steel coverage should conform to the requirements specified on the drawings. Cover in structural members not specified in the details shall conform to the requirements of ACI 318 unless specified otherwise on the drawings.

V STRUCTURAL STEEL

A. MATERIAL

1. Hot Rolled Structural Members: All hot rolled steel plates, shapes, sheet piling, and bars shall be new steel conforming to ASTM Specification A 6.
2. ASTM Specification and Grade: Clearly mark the grade of steel on each piece, with a distinguishing mark visible from floor surfaces, for the purpose of field inspection of proper grade of steel. Unless noted otherwise on the drawings, structural steel shall be as follows:
   a. W- and WT-Shapes: ASTM A 992.
   b. Plates: All plates shall conform to ASTM A 36 unless noted otherwise on the drawings.
   c. Angles, Bent Plates: ASTM A 36.
   d. Other Steel: Any other steel not indicated otherwise shall conform to ASTM A 992 or ASTM A 572, Grade 50, except plates and angles that shall be ASTM A 36.

B. STRUCTURAL BOLTS AND THREADED FASTENERS

1. A 325 Bolts: All bolts in structural connections shall conform to ASTM A 325 Type 1, unless indicated otherwise on the drawings.

C. WELDING

1. Unless noted otherwise, electrodes for welding shall conform to E70XX (SMAW), F7XX-EXXX (SAW), ER70S-X (GMAW), or E7XT-X (FCAW).

D. GROUT

1. Grout below structural steel base plates shall be non-metallic, non-shrink grout with a minimum strength of 8,000 psi.

VI. STEEL DECKS

A. COMPOSITE DECK

1. All deck shall be 40 KSI unless noted otherwise.
2. Attachment of Deck:
   a. Minimum Attachment at Supports: Steel deck units shall be welded to the support members with 5/8" diameter puddle welds at each end of sheet and each intermediate support at each low flute, unless noted otherwise. At members parallel to deck span, spacing of puddle welds shall be 12". A shear connector welded through the deck can replace a required deck weld.
   b. Minimum Attachment at Side Laps: Side laps of adjacent units shall be fastened by welding, sheet metal screws, or button punching at a maximum of one-half the span or 36", whichever is less, unless noted otherwise.

VII. SPECIAL INSPECTIONS

A. The Owner's testing laboratory shall provide special inspection services in accordance with the International Building Code for the items listed below. Special inspection shall be provided by an intendent testing laboratory employed by the Owner.

B. The Special Inspector shall furnish inspection reports to the Engineer of Record

C. Once corrections are performed by the Contractor, the special inspector shall submit a final report to the Engineering that to the best of the Special Inspector's knowledge the work is in accordance with the construction documents and applicable workmanship.

1. Steel Construction:
   a. Welding Inspection
      (i) Periodic verification of welding procedure
      (ii) Periodic verification of material type and grade
      (iii) Periodic verification of welder qualifications
      (iv) Continuous verification of filet welds
   b. High-Strength Bolting
      (i) Periodic verification of bolt size, location and torque
   c. Steel members
      (i) Continuous verification of size and strength

2. Concrete Construction:
   a. Continuous Inspection of Reinforcing Steel Placing
      (i) Verify size, clearances and proper ties
   b. Periodic Inspection of concrete mix
      (i) Verify mix design meets strength and exposure
   c. Continuous Inspection of concrete placement/sampling
      (i) Include sampling for slump, strength and temperature

VIII. SUBMITTALS

A. SUBMITTAL LIST AND SCHEDULE

1. The Contractor shall prepare a detailed list and schedule of all submittal items to be sent to the Structural Engineer prior to the start of construction. This list shall be updated and revised and kept current as the job progresses. The submittal list shall be organized as shown below:
   a. Shop Drawings
   b. Product Data, Certificates, Reports, and Other Literature

B. SUBMITTALS TO BE PROVIDED TO STRUCTURAL ENGINEER

1. The following submittals shall be provided:
   a. Concrete mix.
   b. Structural steel.
   c. Roof (sheet metal, flashing etc...)

   Notes:

   (S&S) Items marked thus shall have the shop drawings and delegated design submittals (including calculations) sealed per the project specifications by an engineer registered in the state where the project is located.

   (REC) Items marked thus shall be submitted to Engineer for Record Only and will not have the Engineer's shop drawing stamp affixed.
2. Submittal Requirements:
   a. All shop drawings must be reviewed and electronically stamped by the Contractor prior to submittal.
   b. Contractor shall provide the submittal in electronic portable document format (PDF) per the Specifications.
   c. The omission from the shop drawings of any materials required by the Contract Documents to be furnished shall not relieve the Contractor of the responsibility of furnishing and installing such materials, regardless of whether the shop drawings have been reviewed and approved.

C. REPRODUCTION

1. The use of electronic files or reproductions of these contract documents by any contractor, subcontractor, erector, fabricator, or material supplier in lieu of preparation of shop drawings signifies their acceptance of all information shown hereon as correct, and obligates themselves to any job expense, real or implied, arising due to any errors that may occur hereon.

IX. MISCELLANEOUS

A. CONTRACT DOCUMENTS

1. It is the responsibility of the Contractor to obtain all Contract Documents and latest addenda and to submit such documents to all subcontractors and material suppliers prior to the submittal of shop drawings, fabrication of any structural members, and erection in the field.
2. The contract structural drawings and specifications represent the alteration made to the structure, and, except where specifically shown, do not indicate the method or means of construction. The Contractor shall supervise and direct the work and shall be solely responsible for all construction means, methods, procedures, techniques, and sequence.
3. Openings through floors, roofs, and walls for ducts, piping, and/or conduit shall be coordinated by the contractor. Contractor shall verify sizes and locations of holes and openings with the Mechanical, Electrical, Plumbing, and Fire Protection drawings and the respective subcontractors.

B. DRAWING CONFLICTS

1. The Contractor shall compare the Architectural and Structural drawings and report any discrepancy between each set of drawings and within each set of drawings to the Architect and Engineer prior to the fabrication and installation of any structural members.

C. CONFLICTS IN STRUCTURAL REQUIREMENTS

1. Where conflict exists among the various parts of the contract documents drawings, and general notes, the strictest requirements, as indicated by the Engineer, shall govern.

D. EXISTING CONDITIONS

1. The Contractor shall verify all dimensions and conditions of the existing building at the job site and report any discrepancies from assumed conditions shown on the drawings to the Engineer prior to the fabrication and erection of any members. Existing dimensions shown on the drawings are for general reference only and should not be used for final construction or detailing.
2. Existing construction shown on the drawings was obtained from existing construction documents and limited site observation. These drawings of existing construction are available for contractor use and shall be referenced for familiarization with existing conditions. However, the available drawings of existing construction are not necessarily complete. The contractor is responsible for being knowledgeable on information presented in available drawings and shall field verify all pertinent information.
3. Demolition, cutting, drilling, etc. of existing work shall be performed with great care so as not to jeopardize the structural integrity of the existing building. If any architectural, structural, or MEP members not designated for removal interfere with the new work, the Owner shall be notified immediately and approval obtained prior to removal of those members.
4. The contractor shall perform a survey to locate all existing utilities (including underground utilities) prior to the start of construction and take care to protect utilities that are to remain in service. Existing civil, mechanical, electrical, plumbing, and emergency protection system servicing any areas outside the work area are to be maintained in operable condition throughout the duration of construction. Contractor shall make necessary temporary connections to maintain existing utilities in service during the work. Temporary, localized interruption of these systems shall require approval by the Owner.
5. The contractor shall provide dust, odor, and noise protection, and safety measures as necessary for the duration of construction. Provide all measures necessary to protect the existing structure, building interior, facility patrons, and other persons during construction.
6. The contractor shall repair all damage caused during construction with similar materials and workmanship to restore conditions to levels acceptable to the Owner.

E. ADJACENT BUILDINGS AND PROPERTY

1. The Contractor shall ensure that all construction methods used will not cause damage to the adjacent buildings and property. This shall include all foundation installation.

F. RESPONSIBILITY OF THE CONTRACTOR FOR STABILITY OF THE STRUCTURE DURING CONSTRUCTION

1. Structural elements of the project have been designed by the Structural Engineer to resist the required code vertical and lateral forces that could occur in the final structure only. The ability of the structural frame to resist the required code forces derives from the complete installation of the new structural elements. It is the responsibility of the Contractor to provide all required bracing during construction to maintain the stability and safety of all structural elements during the construction.

G. RESPONSIBILITY OF THE CONTRACTOR FOR CONSTRUCTION LOADS

1. The structural elements has have been designed for the loads identified within these < drawings that are anticipated to be applied to the structure once work is completed. The Contractor shall not overload the structure during construction. The Contractor shall be responsible for checking the adequacy of the structure to support any applied construction loads. The Structural Engineer is not responsible to design or check the structure for loads applied to the structure for any construction activity.

H. THE STRUCTURAL ENGINEER'S ROLE DURING CONSTRUCTION

1. The Engineer shall not have control nor charge of, and shall not be responsible for, construction means, methods, techniques, sequences, or procedures, for safety precautions and programs in connection with the work, for the acts or omission of the Contractor, Subcontractor, or any other persons performing any of the work, or for the failure of any of them to carry out the work in accordance with the contract documents.
2. Periodic site observation by field representatives of Walter P. Moore and Associates is solely for the purpose of becoming generally familiar with the progress and quality of the Work completed and determining, in general, if the Work observed is being performed in a manner indicating that the Work, when fully completed, will be in accordance with the structural contract documents. This limited site observation should not be construed as exhaustive or continuous to check the quality or quantity of the work, but rather periodic in an effort to guard the Owner against defects or deficiencies in the work of the Contractor.

I. MAINTENANCE STATEMENT

1. All structures require periodic maintenance to extend lifespan and to ensure structural integrity from exposure to the environment. A planned program of maintenance shall be established by the building owner. This program shall include such items such as but not limited to painting of structural steel, protective coating for concrete, sealants, caulked joints, expansion joints, control joints, spalls and cracks in concrete, and pressure washing of exposed structural elements exposed to a salt environment or other harsh chemicals.

X. DRAWING INTERPRETATION

A. DRAWING VIEWS LABELED AS "TYPICAL"

1. Partial plans, elevations, sections, details, or schedules labeled with "Typical" at the beginning of their title shall apply to all situations occurring on the project that are the same or similar to those specifically shown. The applicability of the content of these views to locations on the plan can be determined from the title of the views. Such views shall apply whether or not they are keyed in at each location. Decisions regarding applicability of these "Typical" views shall be determined by the Structural Engineer.

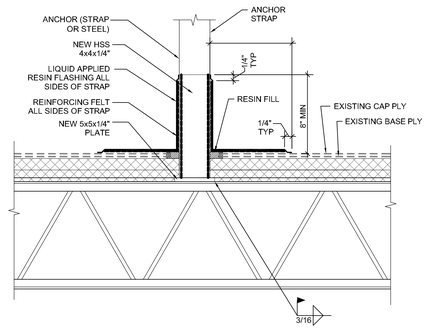
HOUSEKEEPING PAD REINFORCEMENT SCHEDULE		
PAD THICKNESS	TOP REINFORCEMENT	BOTTOM REINFORCEMENT
T = 4"	WWR 4x4-W2.9xW2.9 OR #3@12" EACH WAY	NONE
4" < T <= 6"	WWR 4x4-W4xW4 OR #4@18" EACH WAY	NONE
6" < T <= 8"	WWR 4x4-W6xW6 OR #4@12" EACH WAY	NONE

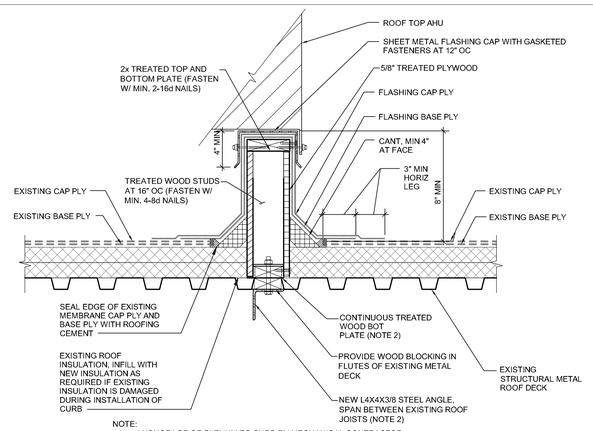
NOTES:
1. REFER TO ARCHITECTURAL OR MEP DRAWINGS FOR HOUSEKEEPING PAD PLAN DIMENSIONS AND THICKNESS (4" MINIMUM THICKNESS).
2. CONTRACTOR SHALL COORDINATE DIMENSIONS AND OTHER SPECIAL REQUIREMENTS WITH EQUIPMENT MANUFACTURERS AND PROVIDE WHERE REQUIRED WHETHER SHOWN ON STRUCTURAL DRAWINGS OR NOT.
3. HOUSEKEEPING PAD IS TO BE USED TO REPLACE THE EXISTING CONCRETE PAD AT THE PENTHOUSE FLOOR LEVEL, SUPPORTING UNITS.

4 TYPICAL HOUSEKEEPING PAD OVER SLAB
NO SCALE



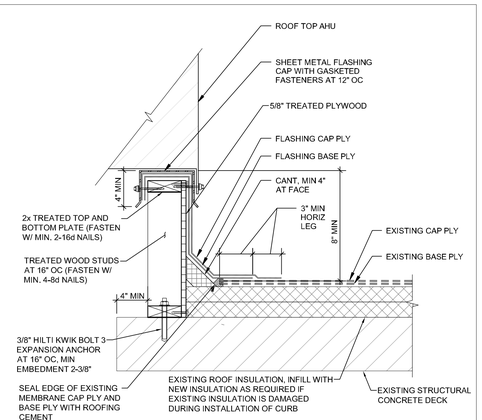
NOTE:
1. LOCATE HSS AT PANEL POINT OF EXISTING JOIST

3 TYPICAL ANCHOR CONNECTION TO ROOF STRUCTURE
1-1/2" = 1'-0"



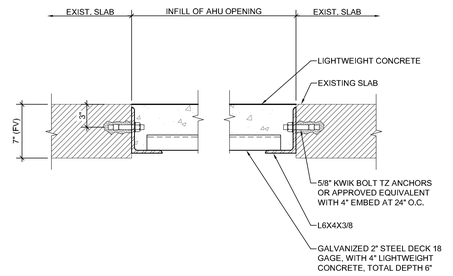
NOTE:
1. ANCHORAGE OF PLENUM TO CURB BY MECHANICAL CONTRACTOR.
2. CONNECT SUPPORT ANGLE TO CURB WITH 1/2" DIA. A307 BOLTS AT 16" O.C. PROVIDE PLATE WASHER AT BOTTOM PLATE.
3. SEE 9/S200 FOR ANGLE SUPPORT INFORMATION.

2 CURB DETAIL AT STEEL DECK - PLENUM WITHOUT ROOF OPENING
1-1/2" = 1'-0"



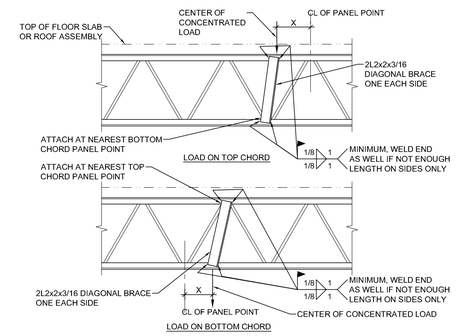
NOTE:
1. SEE DETAIL 2/S201 FOR CURB LOCATED AWAY FROM NEW OPENING.

1 CURB DETAIL AT CONCRETE SLAB - WITH ROOF PENETRATION
1-1/2" = 1'-0"



NOTES:
1. THIS DETAIL IS TO BE APPLIED AT THE AREAS OF SLAB OPENING WHICH WILL NEED TO BE INFILLED UPON COMPLETION OF WORK.
2. FASTEN DECK TO STEEL SUPPORTS PER SDI REQUIREMENTS PRIOR TO POURING CONCRETE.
3. APPLY FIREPROOFING AS REQUIRED TO MEET FLOOR RATING.
4. EXTEND ANGLES FULLY ACROSS SHORT OPENING SIDES. ANGLES ON LONG OPENING SIDES SHALL BE TRIMMED TO ALLOW PASSAGE OF SHORT OPENING SIDE ANGLES.

6 INFILL OF SLAB OPENING
1-1/2" = 1'-0"



NOTES:
1. DIAGONAL BRACE IS NOT REQUIRED FOR "X" LESS THAN THREE INCHES.
2. PROVIDE DIAGONAL BRACE AT LOCATION OF CONCENTRATED LOADS SUCH AS PARTITIONS, HEAVY PIPES, MECHANICAL UNITS, HEAVY LIGHTS AND ANY OTHER CONCENTRATED LOADS AND AS NOTED ELSEWHERE IN THE STRUCTURAL DRAWINGS. LOADS MUST BE APPLIED CONCENTRICALLY TO JOIST BOTTOM CHORD.

5 TYPICAL STIFFENING OF JOIST FOR CONCENTRATED LOADS
NO SCALE
