

IMPORTANT: This syllabus form should be submitted to OAA (gsbs_academic_affairs@uth.tmc.edu) a week before the start of each semester.

NOTE to STUDENTS: If you need any accommodations related to attending/enrolling in this course, please contact one of the Graduate School's 504 Coordinators, Cheryl Spitzenberger or Natalie Sirisaengtaksin. We ask that you notify GSBS in advance (preferably at least 3 days before the start of the semester) so we can make appropriate arrangements.

Course Description:

This 2-credit course is taught during the Summer Semester. A two-hour class will be given on Fridays from 9:00 to 11:00 am at the MD Anderson in Houston (rooms at 50% capacity). The online learning tool Canvas will be used to distribute presentations and reading assignments. Individual lectures will be limited to 45 minutes. All classes will have 10 minutes break after the first lecture. Some classes include a short video demonstration (e.g., microscopy, necropsy, or imaging procedures), peer discussions, and literature review.

Textbook/Supplemental Reading Materials

- N/A

Course Objective/s:

Upon successful completion of this course:

A challenge for the graduate student is to find and apply the best experimental in vivo approach to investigate and solve a research problem. The purpose of this course is to convey fundamental knowledge needed to perform valid and interpretable research using mouse models. The course will feature a diverse group of instructors covering a wide variety of subjects necessary to understand the importance of the appropriate use of mouse models and how to collect and interpret the results. Each instructor has a strong background on the subject presented. A veterinary pathologist and a veterinary mouse geneticist are included as instructors.

Specific Learning Objectives:

1. Students will have learned the basic concepts of mouse biology, embryology, and genetics needed to design in vivo studies.
2. Students will have learned about the advantages and disadvantages of the use of the laboratory mouse as an animal model.
3. Students will have learned how to responsibly design, conduct, and interpret results using mouse models and will be familiar with the influence of genetic background, strain-related lesions, and environment.
4. Students will have been exposed to the state-of-the-art techniques used for the pathological characterization of mouse models.

Student Responsibilities and Expectations:

Students enrolled in this summer course will be expected to perform the following activities each week.

1. Read, process, and review (study) material from 1 or 2 seminal reviews relating to the week's cancer biology topic.
2. Participate in and contribute to course discussions during lectures.
3. Prepare for and take a midterm and final examination based on the lecture and some reading materials.

Students are expected to complete all assigned reading material (reviews and research literature) prior to class. Plagiarism and failure to properly cite scientific literature and other sources will not be tolerated and are grounds for dismissal from the course and further GSBS disciplinary action. Cheating or engaging in unethical behavior during examinations (quizzes and final) will be grounds for dismissal from the course without credit and further GSBS disciplinary action.

Grading System: **Letter Grade (A-F)**

Student Assessment and Grading Criteria : (May include the following:)

Percentage	Description
Midterm Exams (50 %)	6/30 – midterm exam will cover materials from the 5 classes.
Final Exam (50 %)	8/4 – final exam will cover materials from the last 4 classes.

CLASS SCHEDULE - SEE ATTACHED

PRINCIPLES OF EXPERIMENTAL MOUSE PATHOLOGY
SUMMER SEMESTER, 2023 (May 26-August 4)
CLASSES ON FRIDAYS 10am-12pm

DATE	SUBJECT	INSTRUCTOR	LECTURE
5/26	Introduction Rodent biology	Benavides (40 min) Discussion (10 min) Break (10 min)	Introduction to Course Rodent biology, mouse anatomy, biology and physiology
	Rodent Genetics	Benavides (50 min) Break (10 min)	Basic concepts of Rodent Genetics
6/2	Animal Study Design Intro	Bedford (50 min) Discussion (10 min)	Formulating the hypothesis Choosing an experimental system
	Mouse Genetics	Benavides (50 min) Discussion (10 min)	Basic concepts of Mouse Genetics
6/9	Genetic Models of Human Disease	Benavides (50 min) Break (10 min) Benavides (50 min) Discussion (10 min)	Spontaneous Mutations Transgenic mice and inducible systems Targeted Mutagenesis (KOs, KIs) Conditional mutant alleles (Cre/loxP and Flp/FRT systems) Gene editing using ZFN, TALEN, and CRISPR/Cas9
6/16	Genetic Background considerations	Benavides (45 min) Break (10 min) Benavides (45 min) Discussion (20 min)	Standardized genetic nomenclature Genetic drift and substrains Influence of genetic background Modifier genes and passenger mutations
6/23	Histology	Sebastian (40 min) Discussion (20 min)	Basic concepts of histopathology
	Mouse develop Biology	Sebastian (50 min) Break (10 min)	Basic concepts of mouse developmental biology
6/30	MIDTERM EXAM		
7/7	Mouse Models of toxicology	Sebastian (50 min) Break (10 min)	Toxicology studies
	Spontaneous lesions on inbred strains	Sebastian (50 min) Discussion (10 min)	Mouse Phenotyping Background lesions in C57BL/6 mice Background lesions in FVB/N mice Background lesions in 129 mice
7/14	Mouse Models of Human Disease	Benavides (50 min) Break (10 min) Benavides (50 min) Discussion (10 min)	Mouse models of cancer

7/21	Imaging & Digital Pathology	Perez (50 min) Break (10 min) Perez (60 min)	Digital pathology and In vivo imaging systems
7/28	Week for review before last exam		
8/4	FINAL EXAM
