Clinical Data (Warehousing)

Elmer Bernstam, MD, MSE

Professor of Biomedical Informatics and Internal Medicine
The Reynolds and Reynolds Professorship in Clinical Informatics
School of Biomedical Informatics
University of Texas Health Science Center at Houston

 Data that are routinely collected during clinical care are increasingly recognized as valuable institutional assets as well as resources for clinical and translational discovery. In this talk, we will discuss informatics, IT and data science perspectives on clinical data. We will introduce clinical data warehousing (or enterprise data warehousing) including the components or a data warehouse. We will then describe several different informatics projects related to clinical data at UTHealth Houston including population health management and scanned document processing.

Tuesday, January 18, 2022. 12p – 1p. Webcast
