

Pilot Project Application

Data Science and Informatics Core for Cancer Research (DSICCR) provides funding in the form of free service hours to support pilot cancer research. The PI of the pilot project should submit the pilot application form for this service. The proposed pilot project can be an extension of an existing project funded by NIH, CPRIT or other funding agency, or a totally new project without funding support. The pilot project needs a DSICCR participating faculty as a sponsor. Application will be evaluated based on merit and available fund.

DSICCR Pilot Project Application
